

PAPER PEEPSHOW SPOOKY VIEWER

(PENCIL AND RULER VERSION)

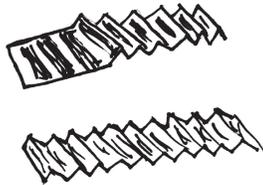

1 Copy all pieces to scale using a pencil and ruler. (The outside pieces are black paper, the inside layers are made of white paper). Make sure to measure and mark lines that need to be folded.

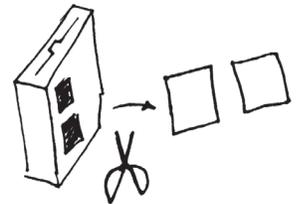

2 Cut out all pieces using scissors.

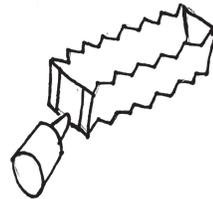

3 Fold the sides carefully and evenly along the dotted lines—be sure that the ends on the dotted side point **up**.

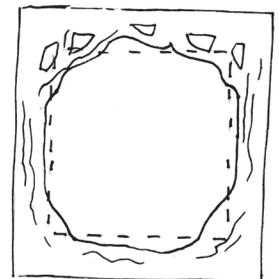

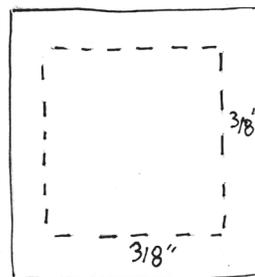

4 Cut two 2½ inch squares from an empty cereal or cracker box.

5 Glue the insides of the folded edges to the two box squares using white glue.

6 Draw trees on the edges of the interior pieces. Keep a border that is around 3/8 inches maximum around the of each layer as shown (an empty space in the middle of each layer 1 1/2 wide needs to be left clear so that the viewer works)

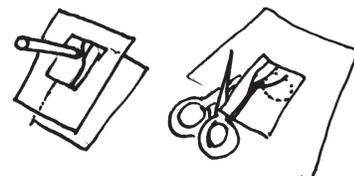

7 Cut out the inside areas of the interior pieces.

8 Using pencil crayons or crayons, color in the sky area and trees on each layer.

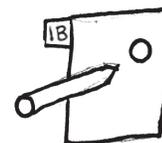

9 Trace and color in the tree and moon panels onto wax paper, tissue paper, tracing paper or vellum. If using wax paper, use permanent markers. If using tissue paper, vellum, or tracing paper, use any markers.

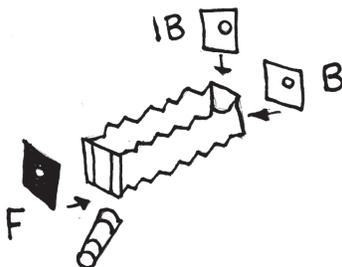

10 Sandwich the traced trees and sky/moon panels into their corresponding paper frames, using white glue to hold shut.

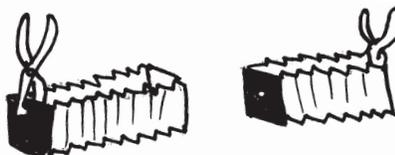

11 Color in the back inside panel labeled **1B** with crayons, pencil crayons and markers with night sky colors.

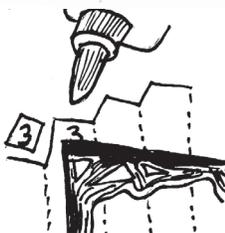

12 Using a generous layer of glue from the paper glue stick, glue the pieces labeled **F**, **1B**, and **B** as shown in the diagram

13 Punch holes using a ¼ inch paper punch in the front and back of the pieces of the paper peepshow where indicated.

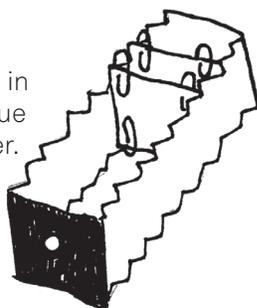

14 Number the folds as shown in the template. Using white glue, glue each of the layers into the paper peepshow, covering the corresponding number. Cut the numbered tabs off as they are added.

Tip: Test to see how flat and square each layer is by folding the peepshow down and lining it up with the square back of the peepshow, before the glue dries.

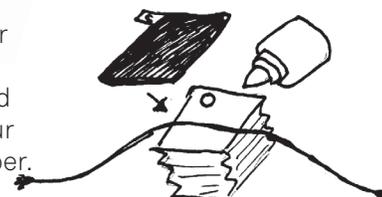

15 Paper clips keep each of the layers in place while the glue dries on each layer.

OPTIONAL:

A string to keep the peepshow compact when not in use.

16 Lay the center of a 24 inch piece of cord or string across the back of the peepshow. Use white glue to adhere the piece labeled **C** to the back, covering the string. Use your fingers like a squeegee to snug fit the paper.

17 Trim the excess paper from the edges of the piece once the glue has dried.

18 Using a ¼ inch paper hole punch, line up the punch with the existing hole on the inside and punch the hole clear again.

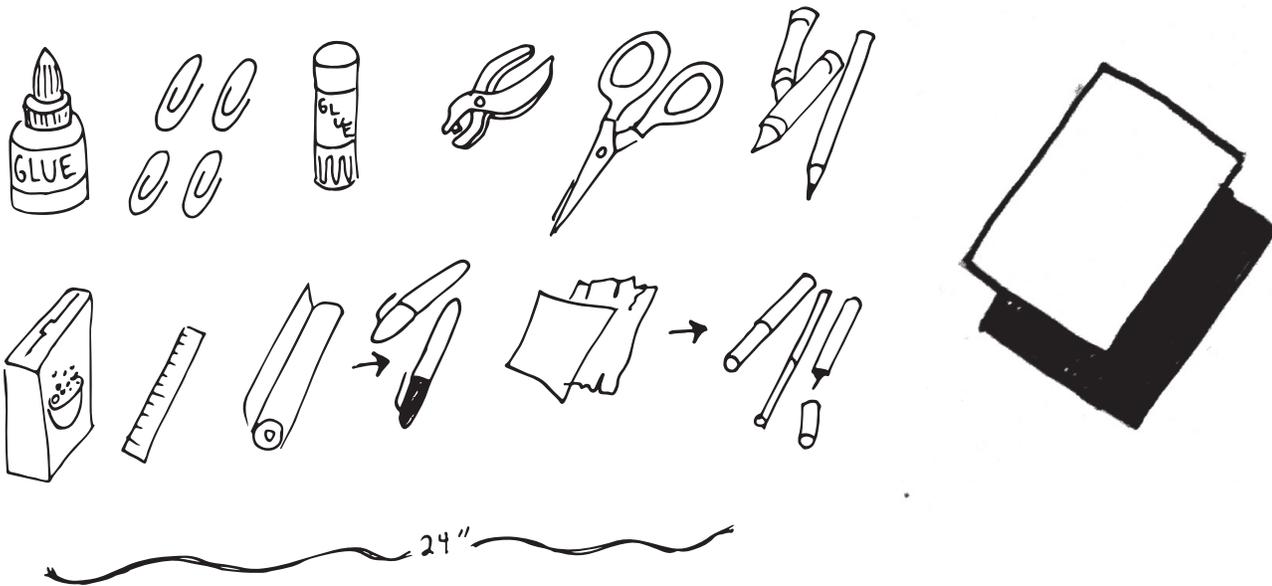

19 Pinch each accordion fold down to collapse the peepshow. Wrap the string around twice and tie in a loose knot at the front.

Now that you have made a spooky forest, what other viewers can you design? A cave? A concert? Use your imagination!

MATERIALS

White glue

Paper clips

Glue stick

¼ inch hole punch

Scissors

Crayons / Pencil crayons

Cereal box

Ruler

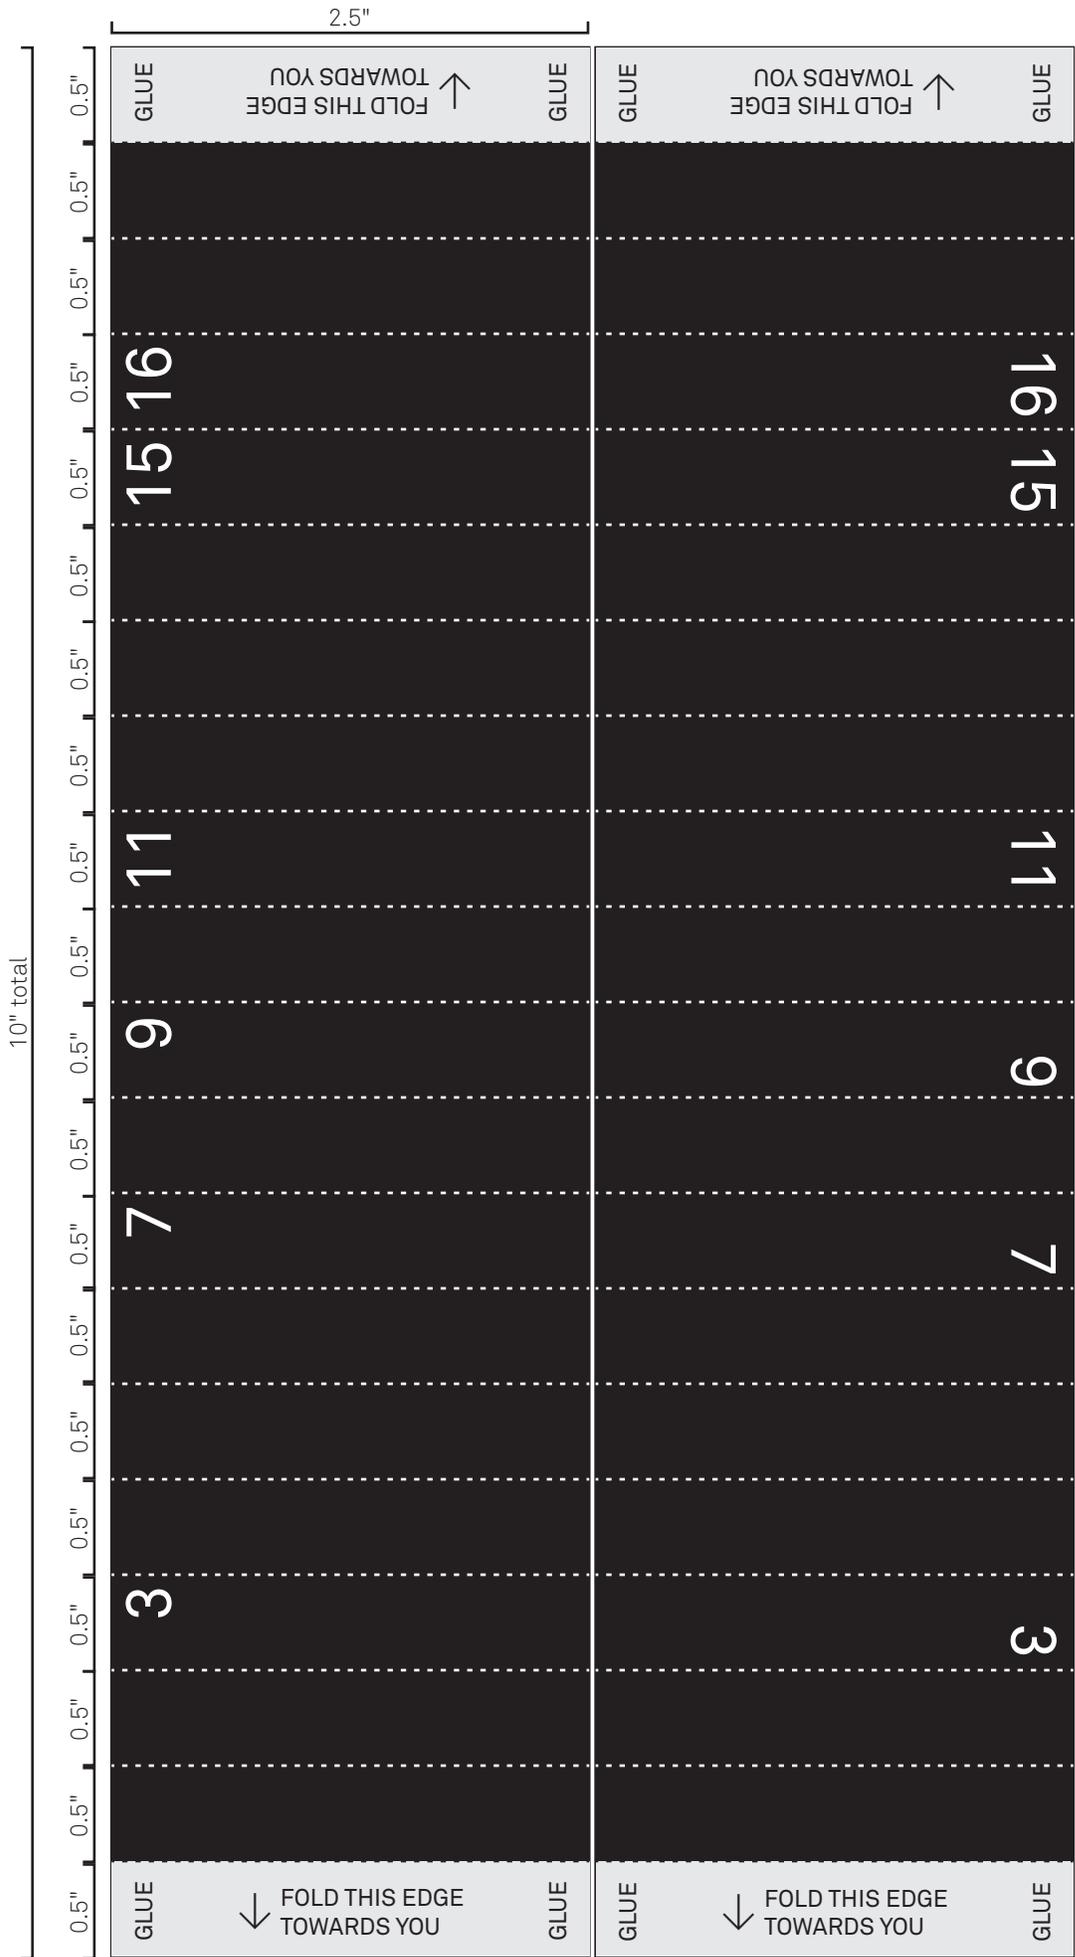

Wax paper & permanent markers OR

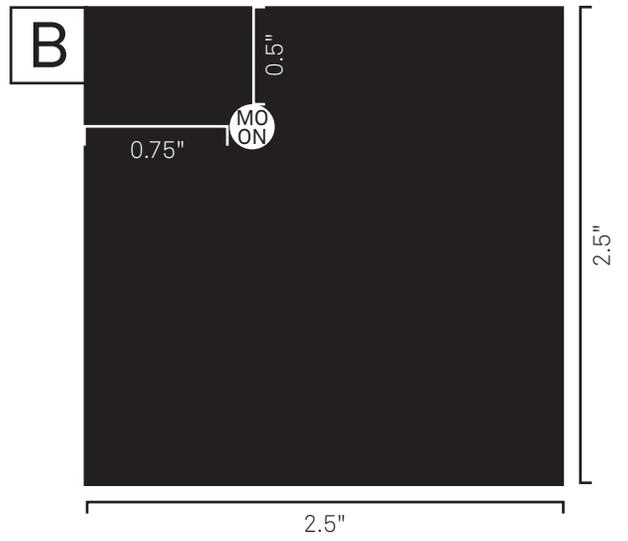

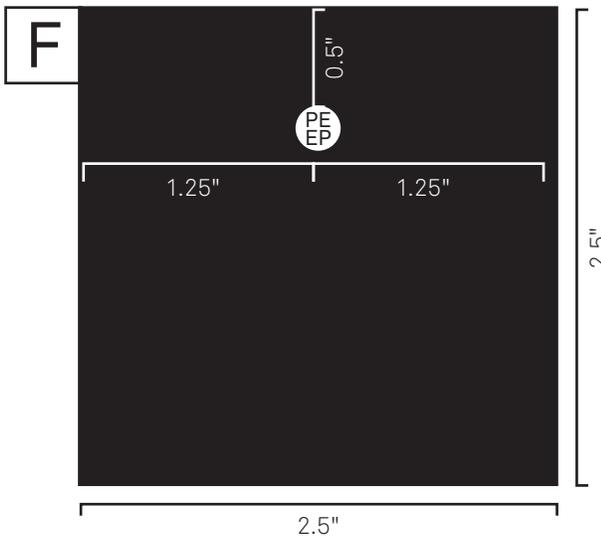

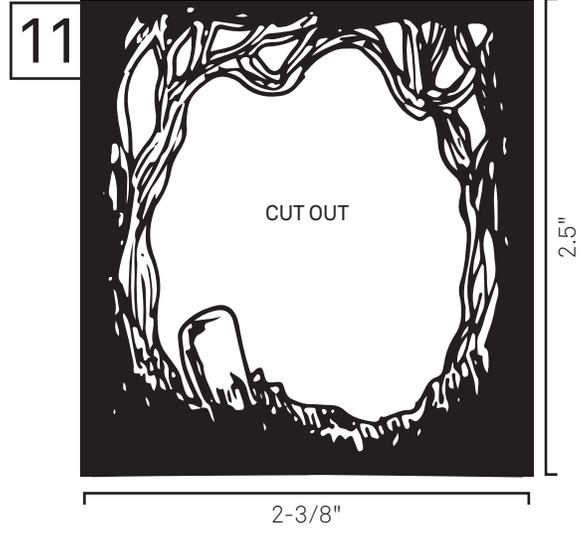

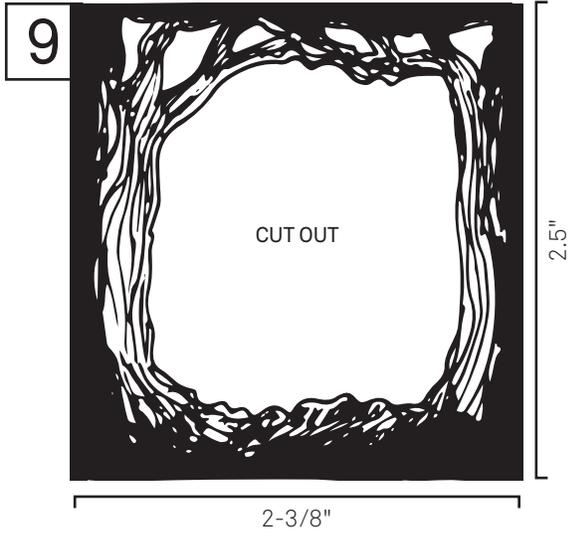

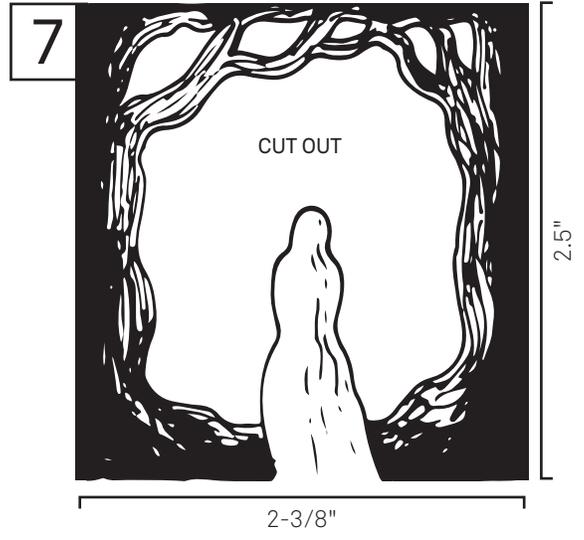

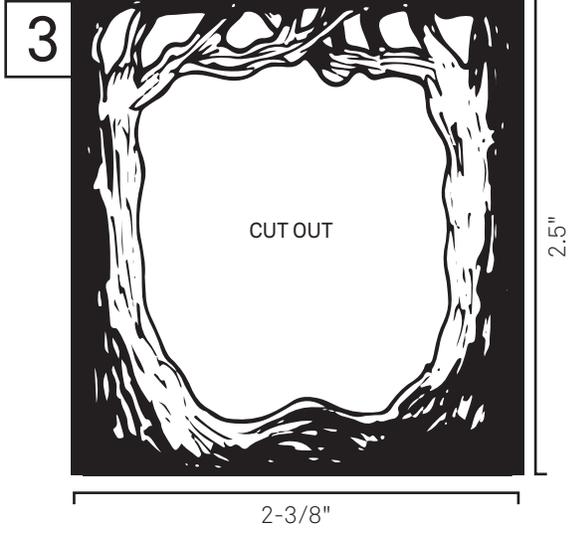

Tracing paper, tissue paper, vellum & any markers

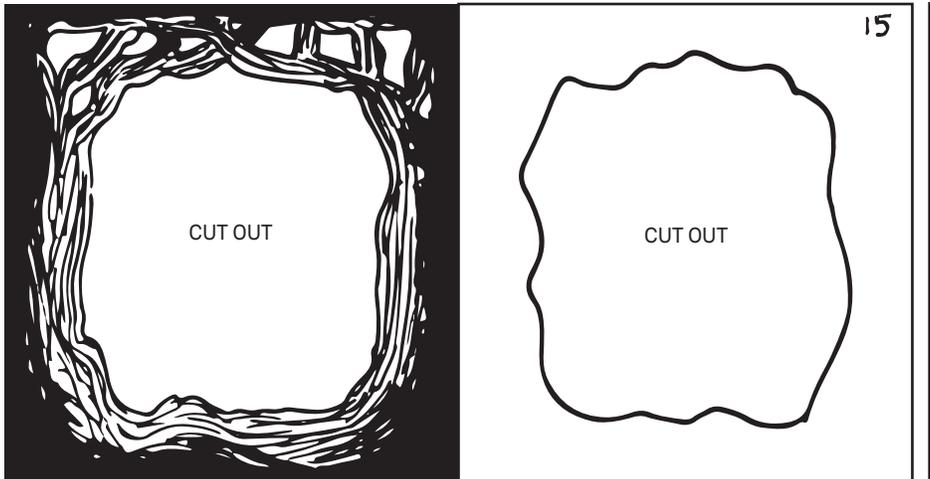

A piece of string or cord, 24 inches long

Black construction paper

White paper
